Abstract of EP1188699

A posture correction device includes a detector configured to detect the state of posture of conveyed paper-like material and correction mechanisms configured to correct the posture of paper-like material according to the detected state of posture of paper-like material. The posture correction mechanisms include a correction roller pair configured to clamp and convey the paper-like material, a support frame configured to support the correction roller pair, a first driving mechanism provided separately from the support frame configured to rotate and drive the correction roller pair, and a second driving mechanism configured to tilt the correction roller pair by a prescribed angle in the paper-like material conveying direction by rotating the support frame.
